# WELCOME

We are pleased to welcome you to the twelfth annual Wakefield sale. It has been a story of two halves in NSW this year with the eastern side having a dry summer while the western side in general had a reasonable season. Things changed dramatically in March with a couple of big rainfall events moving down the coast and with follow up rain the eastern side is set up for a good early spring while the west, in places, is needing winter rainfall. Reports of a possible El-Nino in the spring are easing and "average" conditions are expected. At Wakefield the March rainfall arrived just in time to provide some standing feed for winter and with a mild start to the cold season and continued rain we are set up reasonably well. The prospect in February of dry planting our pasture was a little scary but establishment has been good and the majority of the sale bulls will be presented for sale off grass only.

There is a noticeable shift starting in the feeder market with selected feedlots now offering prices for Charolais x British cattle equivalent or better than prices available for straight British cattle. This is because of the increased growth rate and higher yield from the Charolais infusion and is particularly noticeable in the females. As a result these females are highly sought after. Trial work has consistently shown an increase of 35 – 40 kg at weaning weight for Charolais infused British cattle over straight British cattle with no live calf percentage difference. There is huge potential to drive profit margins with Charolais infusion and we are happy to supply details to any of our clients who would like to access these feeder cattle markets.

Australia is being insulated from world beef price fluctuations because of restocker demand, feedlot and processor shortfalls. There are still large numbers of females being slaughtered, taking advantage of high prices and as a result the national beef herd is building at only a slow rate. Experts are predicting the current pricing to hold for at least two years and there should be little chance of major price reductions in the foreseeable future.

*Proudly supporting  
the Charolais Youth Stampede 2017.*

Despite the price rises, we are still only catching up in real terms to where we were many years ago and much of the extra income will be needed to be used on infrastructure, fertiliser, loan reductions, restocking and genetic improvement. We are starting to see an increase in the prices paid for land suitable for cattle production, initially it was properties selling that had been listed for a length of time at a perceived high price and now with long term confidence building potential purchasers are building budgets around current cattle prices.

*Sydney Champion Female Boongatti Fantasy.  
Full sister to lots 10 & 26.*

On the family front, our eldest daughter Lucy, an agronomist, continues to help us on the farm. She also operates the farm stay business and she and fiancé Chris are just completing a new cabin. Lucy also works at Precision Pastures doing soil sampling, analysing results and setting up mapping for variable rate spreading. She and Chris are a great asset to our business. Our youngest daughter Claire is completing Vet Science in Wagga and plans to do some travelling overseas before starting as a vet in Inverell in September. Claire is very excited to finally be able to start practising after almost 6 years of study.

Jenny and I have enjoyed the opportunity to see quite a lot of baby calves and weaners sired by Wakefield bulls lately and are very proud of what is happening over a wide range of environments and cow breeds. Over the last 12 months, once again, there have been many outstanding results in feedlots, sales, abattoirs and stud bull auctions from stock sired by Wakefield bulls. The overwhelming comments have been how well the bulls are performing under tough conditions, their longevity, and the market suitability of their progeny.

We would like to thank our bull buyers for their loyalty and it appears that the persistence shown by the beef industry is finally paying off.

The Wakefield bull breeding program is tailored to produce calves which will fit the specifications of a wide range of markets and remember we are a commercial operation as well and have a good understanding of what is required. We appreciate feedback from our clients on how our bulls are performing as it helps us to make more informed breeding decisions. Once again at this sale we have horn/poled tested a number of our Charolais bulls and will have results available on sale day. The progeny from homozygous polled bulls will be polled regardless of cow status. We are moving towards a higher percentage of polled Charolais but are being careful to not compromise performance to achieve this.

Once again, 2017 will see the majority of our purebred calves born by AI and embryo transfer with the emphasis on breeding tough cattle that are at the top of the breed for dollars earned. The bulls this year have been prepared mostly off grass with a small percentage grain assisted and will be in a forward but not fat condition. We do not aim to present 1000kg bulls for sale but prefer to produce bulls that can be put straight to work. Quite a few of our bulls are jumped directly off the truck straight into client's cow herds!

We look forward to seeing you on Friday the 18th of August at our "all weather" sale complex. Complimentary lunch will be available prior to the sale, which commences at 1pm. Remember if you would like any more information we are only a phone call away and on the day, pack a jumper and bring your catalogue!

*The Frizell Family*

## STUD HISTORY

***This year we celebrate 157 years of continuous cattle breeding  
and Wakefield has been held in the same family since 1860.***

Wakefield began breeding Charolais in 1970 when the breed was first introduced into Australia and used most of the early French bulls in grading up programs until currently a herd of 450 Charolais, Charolais composite and Angus females are maintained. Through the years there have been selected introductions of stud Charolais females, purchase of embryos, regular artificial insemination and embryo transfer programs.

We have been breeding Angus for our composite program for many years and made the decision to join our grandparent lines to Angus to produce purebred. In combination with upgrading these cows to APR status and introduction of industry leading embryos the Angus herd is growing rapidly. We think this year's Angus bulls are the best we have ever produced.

Our emphasis is to produce bulls to increase profit in our client's herds and the calves born over the next few years will be sired by a smaller number of select sires. We think that Canadian, French and Australian Charolais sires provide the balance of growth and carcass characteristics we require. Less reliance will be placed on American Charolais sires, which in general are lacking top end growth and uniformity.

Wakefield was amongst the pioneers in the use of Charolais Composite bulls and it is pleasing to see Charolais being recognised as the "breed of choice" in crossbreeding programs. We have decided to concentrate more on our purebred lines as they seem to provide more uniformity in their progeny and keep breeding programs simpler for our clients. A lot of herds have used composite bulls as a stepping stone into the Charolais breed and have quickly realised the financial benefits of crossbreeding. Our aim is to breed moderate birth weight Charolais while maintaining good growth and carcass characteristics.

Wakefield is a Group Breedplan member so EBVs are available on all purebred bulls and our herd is based around selecting for commercially important traits, such as yield which will become increasingly important under new payment systems. We are bull breeders not bull feeders. Structural correctness is very important to us and we like to have feedback from our clients to make sure the bulls are performing well under all conditions.

We are proud of our sale bulls and can recommend them to you as herd improvers and they can be purchased in the knowledge that they will perform well under commercial conditions.

# SALE INFORMATION

# GETTING RESULTS

## REFRESHMENTS

Complimentary lunch and refreshments will be provided by Wakefield.

## INSPECTION

Inspection can be made prior to sale day by appointment with the agents or the vendors. Bulls will be available for inspection on sale day from 10am.

## TREATMENT SCHEDULE BULLS

**28/6/2017**

Lepto vaccination  
Pestivirus vaccination  
Vibriosis vaccination  
Three-day sickness vaccination  
Multimin injection  
Pour on Cydectin  
Fasinex oral

**2/8/2017**

Arrest backline  
8 in 1 booster (booster required yearly)  
Lepto booster (booster required yearly)  
Pestivirus booster (booster required yearly)  
Vibriosis vaccination (booster required yearly)  
Three-day sickness booster (booster required yearly)  
Note all pastures have been treated with Selcote Ultra

## QUALITY CONTROL

Pestivirus tested negative (hair sample)  
Semen tested  
Johnes Status – JBAS 7  
EU Accredited herd  
Tested by Bovine Scanning Services for

- Eye muscle area
- Rib fat
- Rump fat
- IMF
- Scrotal circumference

Angus bulls clear of genetic conditions AM, NH,CA and DD

## GUARANTEE

In the unlikely event of infertility, provided it is not caused by injury, stress or disease contracted post sale, we will endeavour to supply a satisfactory replacement if available or issue a credit to equal the purchase price minus the salvage value to be used at future Wakefield sales. The purchaser will provide a veterinarian's certificate within six months of the purchase date.

## TRANSPORT

Carriers will be attendance at the sale. We take a keen interest in arranging the most favourable transport for your purchases. This year we are offering free freight from Wakefield to Grafton and Kempsey saleyards, with the carrier of our choice. Delivery arrangements are to be made in writing on the buyers instruction form provided in the back of this catalogue.

## STUD TRANSFERS

All registered animals are eligible for transfer. For transfer of animals purchasers must be members of the relevant breed society.

## REBATE

2% rebate available to outside agents accompanying potential purchasers and settling for purchases within 7 days of receipt of invoice.

## NOTICE TO BUYERS

All lots will be sold subject to the usual terms and conditions governing auction sales. Phone service is available at sale complex. Please contact the vendors or your preferred agent on sale day to arrange phone hook-up. This year's sale is also interfaced with Auctionsplus Livestreaming.

## CARING FOR YOUR BULL

This year's sale bulls range from 16 - 39 months of age and will need to be managed accordingly. There are many advantages in buying younger bulls. You see the bull closer to the weights you are likely to be marketing your cattle at. You will get an extra year of use from your bull and most importantly you are getting the 'pick of the crop'. In our experience the best bulls will be good at all stages of growth and not only when they are mature. You can be confident that a young bull with eye appeal will only get better! But younger bulls are still growing quickly and need enough feed to maintain their growth pattern while settling your cows. Younger bulls can be introduced into paddocks with older bulls but remember he will be on the bottom of the pecking order and will need room to avoid the others. His nutritional requirements will be greater than a mature bull so make sure he has adequate feed. Our bulls are used to running in a mob and will arrive in a strange environment at the purchaser's property. Unload him and if possible make sure he has a steer or cow as a companion straight away. Our cattle are mustered on motorbikes and are handled gently but firmly. The bulls have been trained to respect electric fencing.

**This year's WAKEFIELD BULL SALE will be interfaced with AuctionsPlus.**

This sale is live online in real time, but will be interfaced with a physical auction that is being controlled by an auctioneer. A hand-held wireless connected computer is used to bring the onsite prices to the internet, for the remotely connected bidders to observe. These bidders can place a bid on their computer and the result is immediately transferred to the person onsite, who the wireless device will raise that bid with the auctioneer.

**Important information:** Bidding is only available to registered AuctionsPlus users. You must register **at least 24 hrs prior to the sale** with AuctionsPlus Sydney on their website [www.auctionsplus.com.au](http://www.auctionsplus.com.au)

For further information about AuctionsPlus, please contact Mark Haywood of Ray White Rural Kempsey on 0437 286 494.

Wakefield Charolais sired weaners, Clarence Valley

# UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

### Charolais BREEDPLAN EBV Explanations

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as + ive or - ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Charolais BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and docility. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

- **CE % Direct** = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

- **CE % Daughters** = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-Day Growth EBV (kg)** is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV (kg)** is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV (kg)** is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV (cm)** is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Carcass Weight EBV (kg)** is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

**Eye Muscle Area EBV (sq cm)** is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

**Rib Fat and Rump Fat EBVs (mm)** are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV (%)** indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV (%)** is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

### Selection Indices

Charolais selection indices are calculated for three market specifications, namely, Domestic, Export and Northern Terminal. Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values.

Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system.

More information is available on selecting animals using a selection index. The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

	CHAROLAIS Breed Avg. EBVs for 2015 Born Calves

# UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

**Domestic Index (\$)** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting grass-finished production for the domestic trade. This Index assumes pasture grown & finished steers weighing 430 kg (240 kg HSCW and 6 mm P8 fat depth) at 12 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

**Export Index (\$)** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting the production of steers for export markets. This Index assumes pasture grown & finished steers weighing 700 kg (380 kg HSCW and 9 mm P8 fat depth) at 29 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

### Accuracy

**Accuracy (%)** is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease. Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

- **less than 50%:** Low accuracy. EBVs are preliminary and could change substantially as more performance information becomes available.
- **50-74%:** Medium accuracy. Usually based on the animal's own records and pedigree.
- **75-90%:** Medium-high accuracy. Some progeny information included. EBVs may change with addition of more progeny data.
- **more than 90%:** High accuracy estimate of the animal's true breeding value.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

**COMMENTS:** Lannister is a homozygous polled bull with an exceptional phenotype. He is a very correct, slick coated son of Hornblower that we regard highly here at Wakefield. He has a wonderful temperament, smooth shoulders and good neck extension. This bull will add plenty of punch to your calves and they will be born easily. What's not to like! Lannister has been used in the Wakefield herd. **Top 5% for gestation length, top 10% for EMA and retail beef yield.**

**COMMENTS:** Leading Edge has been used in the Wakefield herd because of his wonderful calving ease and birth weight figures. He is a slick coated, polled bull by Canadian sire Merit Roundup. He has a wonderful temperament and although he is a little rugged today because he has been out with cows we can recommend this bull to you. **Top 1% for gestation length, top 5% for calving ease direct and calving ease on daughters and scrotal circumference. Top 10% for low birth weight and domestic and export indices.**

**COMMENTS:** A very good bull to start the Angus today. He is by the number one bull for calving ease and birth weight in Ayrvale Bartel. We have used Bartel on our heifers with good success. The calves are born easily and grow fast. He is a slick coated bull with good depth of body and a good top line. This bull has been used in the Wakefield herd, we should have calves on the ground in August. **Top 5% for milk, days to calving, domestic, heavy grassfed and Angus breeding index. Top 10% for EMA, carcase weight and heavy grainfed index. Top 15% for IMF, low birthweight and scrotal circumference and top 20% for Rump fat.**

**COMMENTS:** Wakefield Jackson is by a homebred bull that we used on our heifers out of a Raff Exterminator female with very good milk and fertility. This bull oozes eye appeal and has the punch that we're looking for in our bulls. He has tremendous length of body and stands on a good frame. This bull will do the job in any beef enterprise! **Top 15% for 600 day growth and top 20% for scrotal.**

## What is the Poll Gene Marker test?

The Poll test is used to measure the likelihood that a polled animal only carries the polled gene, following its release in 2010 by the CRC for Beef Genetic Technologies. AGL continues to invest in R&D to increase accuracy and application across a wider number of breeds.

The test is used to determine if an animal is 'true polled', known as homozygous (PP), or heterozygous (PH). Identifying breeding animals that are 'true polled' and carry two copies of the poll allele will dramatically reduce the requirement for dehorning in subsequent generations.

**COMMENTS:** What a sweet little polled red factor heifer with plenty of style and eye appeal. It was very hard to let Autumn 18 go but we can't keep them all! She is the daughter of the top price bull Wakefield Jumble from last year that sold to Temana Charolais stud. Autumn 18 is very correct, has a wonderful confirmation, is deep flanked and very feminine. She has a wonderful temperament and would suit any stud looking for an exceptional female. Her mother will be flushed again later in the year. **Top 15% for EMA and top 10% for retail beef yield.**

**COMMENTS:** There is plenty of punch and style in this female. Absolute 'gem' of a heifer with some very handy bloodlines. Amaze 43 is a scurred daughter of Reserve Junior Champion at Sydney Royal in 2015 Wakefield Jack Flash J635E. Jack Flash was the top price bull at the 2015 sale selling to Kilkenny Charolais. The Jack Flash calves have been standouts in the Wakefield herd - the bulls and the heifers. Amaze 43 is the grand daughter of an exceptional Mr Perfect female that was a donor for many years at Wakefield. The Ace line has also been prolific in the show ring and this heifer will have fertility and longevity on her side. **Top 20% for 200 day growth.**

MOUNT WILLIAM V92E (BS V92E)

ROSEDALE DONOTELLO (MR D22E) (P)  
WAKEFIELD ASCOT 7 (BIS D346E) (P)

VIOLET HILLS ZACHARIAH (VHV Z80E) (P)  
WAKEFIELD BLUSH (BIS B938D) (P)

**COMMENTS:** Blush 13 is another impressive polled Jumble daughter from one of the best cow families in the Wakefield herd. A stylish, structurally correct heifer with an excellent hair type who has always caught our eye. With her top female genetics from both sides of the pedigree and her "look at me" eye appeal she will make a front paddock cow in any breeding program. EBVs available on sale day.
