16TH ANNUAL CHAROLAIS & ANGUS BULL SALE

Friday 13th August 2021 at 1pm
"Wakefield", Wollomombi, NSW

"Wakefield" is located approximately 55km
East of Armidale on the Waterfall Way.

- * 141km South West of Grafton.
- * 35km West of Ebor.

The Sale will also be Interfaced
via Elite Livestock Auctions

Visit the website for more information:

We are pleased to welcome you to the Sixteenth Annual Wakefield Sale.

Reading through last year's welcome the comments were about drought and fire recovery which seem a distant past at the moment but I think it does us all good to have a look at photos from that period to remind ourselves what can happen. A different set of problems have occurred this year with many producers, particularly on the North Coast, suffering flood damage and prolonged wet and boggy conditions. Our thoughts are with our clients who are still recovering from the fires and more recently floods across a large area. A lot of farms are reporting increased problems with weeds, whether introduced with stock fodder or larger infestations of local weeds which took the opportunity of reduced ground cover to establish. It seems each year brings more species of weeds with Fireweed becoming a problem on the Tablelands as well now with African Love grass and Serrated Tussock plants appearing in the last ten years. Gone are the days of just blackberry spraying!

We have been spending a lot of 2021 catching up on repairs and maintenance to fences, yards and sheds after a fair bit of neglect due to drought feeding. We still have a fair way to go! I think most producers are in the same position but it is fabulous to see a lot more work being done on farms with the increased returns for livestock and certainly it is quite difficult to find fencing contractors and builders at the moment or for that matter even sourcing steel and other building materials. The flow on effect from increased livestock prices in the rural towns has been substantial and has moderated the Covid induced slowdown seen in the bigger cities.

As we are writing this Welcome the Covid situation has flared up again with masks being mandatory in regional areas, which is another good reason to not go to town in my opinion, but we will have to deal with the Covid rules as they stand at sale time and make decisions based on the current advice. Once again the sale will be interfaced with Elite Livestock Auctions and inspections are available before the sale to clients who would prefer to operate online.

It was a pleasure to attend and once again sponsor the Grafton weaner sale and have a chance to see an outstanding line up of young cattle. Congratulations to the vendors on the quality of the weaners and, even with some of "the bloom" taken off them with the persistent wet weather, we were very impressed with the quality of the cattle on display. It is tremendous to see producers being rewarded for the effort they are putting into their breeding programs. One of the things we have missed the most is seeing the progeny from Wakefield sires either in the paddock or at the saleyards over the last 18 months or so.

It is one of those rare events when nearly all of the Eastern states from the top of Queensland to Victoria are experiencing average to above average rainfall and the outlook leading into the spring is positive, this coupled with the highest cattle prices seen and a severely depleted National herd has created a perfect storm not seen in the cattle industry for a very long time. The EYCI continues to set weekly records and the price for breeding females is continuing to rise and whilst there will undoubtedly be a correction at some stage it is difficult to see anything drastic happening in the near future. It is certainly time for producers to boost cash reserves and catch up on maintenance. With interest rates remaining low and increased competition from corporate investors there has been a quite dramatic lift in land prices which has increased landowner's equity but made expansion a more difficult proposition. It is hard to imagine land prices to continue rising at the levels they have but historically that has been the case and with limited areas suitable for grazing and encroaching urban sprawl it will probably continue. Interestingly overseas investors seem to think that Australian land is still cheap in comparison to world prices.

On the family front Chris and Lucy continue to improve their farm at Dorrigo and are busy running both farm stays. The Good Life Beef business is continuing to expand and they have just leased 1200 acres closer to Armidale to accommodate their rapidly expanding breeding herd. The latest Covid related travel restrictions have caused some farm stay cancellations but in general the demand from domestic travellers has been remarkable. Chris continues to work at Grazag and help Lucy on the weekends and after hours (as well as bringing building supplies home for the in-law's renovations) – he is a busy boy! Our youngest daughter Claire has been working in a mixed practice in the Guernsey Islands UK until recently and is having a short break until starting work at a vet practice in Wales. She is getting quite good at giving long range vet advice but it is not the same as being here! We are not sure when she will be able to travel back and the joke is that her car will have historic number plates by the time she gets here! We are very grateful to our family for everything they do for us and proud that they see a future in agriculture.

Over the last 12 months, once again, there have been many outstanding results in feedlots, sales, abattoirs and stud bull auctions from stock sired by Wakefield bulls. The overwhelming comments have been how well the bulls are performing under tough conditions, their longevity, and the market suitability of their progeny. We would like to thank our bull buyers for their loyalty and it is reassuring to see their dedication being repaid with the strength of the cattle market.

WELCOME

The Wakefield bull breeding program is tailored to produce calves which will fit the specifications of a wide range of markets and remember we are a commercial operation as well and have a good understanding of what is required. We appreciate feedback from our clients on how our bulls are performing as it helps us to make more informed breeding decisions. Once again, 2021 will see a large percentage of our purebred calves born by AI and embryo transfer with the emphasis on breeding tough cattle that are at the top of the breed for dollars earned. The bulls this year have been prepared on planted pasture grass paddocks with very limited or no grain assistance. They will present in a forward but not fat condition but are a little heavier this year, despite being born during the drought most of their weaned life has been under favourable conditions. As always we will not compromise by heavily grain feeding our bulls. We are not one of the breeders whose bulls are the best you will ever see them on sale day! We think this is critical to the longevity of the bull and his ability to hold condition under tougher conditions. Quite a few of our bulls are jumped directly off the truck straight into client's cow herds!

We look forward to seeing you on Friday the 13th of August at our "all weather" sale complex. Complimentary lunch will be available prior to the sale, which commences at 1pm. Remember if you would like any more information we are only a phone call away and on the day, pack a jumper and bring your catalogue!

The Frizell Family

STUD HISTORY

***This year we celebrate 161 years of continuous cattle breeding
as Wakefield has been held in the same family since 1860.***

Wakefield began breeding Charolais in 1970 when the breed was first introduced into Australia and used most of the early French bulls in grading up programs until currently a herd of 600 Charolais, Charolais composite and Angus females are maintained. Through the years there have been selected introductions of stud Charolais females, purchase of embryos, regular artificial insemination and embryo transfer programs.

We have been breeding Angus for our composite program for many years and made the decision to join our grandparent lines to Angus to produce purebred. In combination with upgrading these cows to APR status and introduction of industry leading embryos the Angus herd is growing rapidly.

Our emphasis is to produce bulls to increase profit in our client's herds and the calves born over the next few years will be sired by a smaller number of select sires. We think that Canadian, French and Australian Charolais sires provide the balance of growth and carcass characteristics we require. Angus sires are being sourced from the US and Australia.

Wakefield was amongst the pioneers in the use of Charolais Composite bulls and it is pleasing to see Charolais being recognised as the "breed of choice" in crossbreeding programs.

We have decided to concentrate more on our purebred lines as they seem to provide more uniformity in their progeny and keep breeding programs simpler for our clients.

A lot of herds have used composite bulls as a stepping stone into the Charolais breed and have quickly realised the financial benefits of crossbreeding. Our aim is to breed moderate birth weight Charolais while maintaining good growth and carcass characteristics.

Wakefield is a Group Breedplan member so EBVs are available on all purebred bulls and our herd is based around selecting for commercially important traits, such as yield which will become increasingly important under new payment systems. We are bull breeders not bull feeders.

Structural correctness is very important to us and we like to have feedback from our clients to make sure the bulls are performing well under all conditions.

We are proud of our sale bulls and can recommend them to you as herd improvers. They can be purchased in the knowledge that they will perform well under commercial conditions and are fully guaranteed.

REFRESHMENTS

Complimentary lunch and refreshments will be provided by Wakefield.

INSPECTION

Inspection can be made prior to sale day by appointment with the agents or the vendors. Bulls will be available for inspection on sale day from 10am.

COVID-19

Please follow directions and safety signs on sale day in regards to COVID 19. The sale will be operated under the current guidelines at the time of sale. All guests will be required to sign in on arrival and adhere to current social distancing rules. Please be responsible and respectful of others and their health and safety, and do not attend if you are unwell.

Online bidding with Elite Livestock Auctions and over the phone bidding is available and private inspections are welcomed and encouraged at any time prior to the sale.

TREATMENT SCHEDULE BULLS

- 15/6/2021

Bayer Exifluke 240 oral
Pour on Cydectin Platinum
Multimin injection
8 in 1 booster (booster required yearly)
Lepto vaccination
Pestivirus vaccination
Vibriosis vaccination
Three-day sickness vaccination

- 20/7/2021

Lepto booster (booster required yearly)
Pestivirus booster (booster required yearly)
Three-day sickness booster (booster required yearly)
Vibriosis booster (booster required yearly)

QUALITY CONTROL

Pestivirus tested negative (hair sample)
Semen tested
Johnes Status – JBAS 7
EU Accredited herd
Angus bulls AM, NH, CA and DD status tested and Sire verified.

GUARANTEE

In the unlikely event of infertility, provided it is not caused by injury, stress or disease contracted post sale, we will endeavour to supply a satisfactory replacement if available or issue a credit to equal the purchase price minus the salvage value to be used at future Wakefield sales. The purchaser will provide a veterinarian's certificate within six months of the purchase date.

TRANSPORT

Carriers will be attendance at the sale. We take a keen interest in arranging the most favourable transport for your purchases. This year we are offering free freight from Wakefield to Grafton, Casino, Walcha, Armidale, Kempsey and Lismore saleyards, with the carrier of **our** choice. Delivery arrangements are to be made in writing on the buyers instruction form provided in the back of this catalogue.

STUD TRANSFERS

All registered animals are eligible for transfer. For transfer of animals purchasers must be members of the relevant breed society.

REBATE

2% rebate available to outside agents accompanying potential purchasers and settling for purchases within 7 days of receipt of invoice.

NOTICE TO BUYERS

All lots will be sold subject to the usual terms and conditions governing auction sales.

Phone service is available at sale complex. Please contact the vendors or your preferred agent on sale day to arrange phone hook-up. **This year's sale is also interfaced with Elite Livestock Auctions.**

CARING FOR YOUR BULL

This year's sale bulls range from 18 - 29 months of age and will need to be managed accordingly.

There are many advantages in buying younger bulls. You see the bull closer to the weights you are likely to be marketing your cattle at. You will get an extra year of use from your bull and most importantly you are getting the 'pick of the crop'. In our experience the best bulls will be good at all stages of growth and not only when they are mature. You can be confident that a young bull with eye appeal will only get better! But younger bulls are still growing quickly and need enough feed to maintain their growth pattern while settling your cows.

Younger bulls can be introduced into paddocks with older bulls but remember he will be on the bottom of the pecking order and will need room to avoid the others. His nutritional requirements will be greater than a mature bull so make sure he has adequate feed.

Our bulls are used to running in a mob and will arrive in a strange environment at the purchaser's property. Unload him and if possible make sure he has a steer or cow as a companion straight away. Our cattle are mustered on motorbikes and are handled gently but firmly. They may need to be introduced to horses. The bulls have been trained to respect electric fencing.

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in
Australia and "Happy Bidding"

-  1 Simply go to **www.elitelivestockauctions.com.au** using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the "Sign Up" page / link
-  3 Create a bidding profile using the bidder registration page.
(You can either register as a livestock agent, company or private buyer.)
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click "Register"
-  6 You will then be notified by email that an account has been created

-  7 Once an account has been created you are all "Set to Bid"
-  8 Each auction can then be viewed by clicking "Live Auction" logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click "Request to Bid"
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see "✓ Bid Request Approved"
-  11 On Sale day simply login, click "Enter Auction" on the catalogue page and you can start bidding.
(There is no need for software download)
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

Having trouble registering and logging in?

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Charolais BREEDPLAN EBV Explanations

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Charolais BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcase merit and docility. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

- **CE % Direct** = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

- **CE % Daughters** = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Carcase Weight EBV (kg) is based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 650 days.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Charolais selection indices are calculated for three market specifications, namely, Domestic, Export and Northern Terminal. Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values.

Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system.

More information is available on selecting animals using a selection index. The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Domestic Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting grass-finished production for the domestic trade. This Index assumes pasture grown & finished steers weighing 430 kg (240 kg HSCW and 6 mm P8 fat depth) at 12 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

Export Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting the production of steers for export markets. This Index assumes pasture grown & finished steers weighing 700 kg (380 kg HSCW and 9 mm P8 fat depth) at 29 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease. Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

- **less than 50%:** Low accuracy. EBVs are preliminary and could change substantially as more performance information becomes available.
- **50-74%:** Medium accuracy. Usually based on the animal's own records and pedigree.
- **75-90%:** Medium-high accuracy. Some progeny information included. EBVs may change with addition of more progeny data.
- **more than 90%:** High accuracy estimate of the animal's true breeding value.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

COMMENTS: Masquerade has been a very successful sire in the Wakefield herd for the last couple of years. He has sons at this sale that are true to type Charolais, full of power with tremendous length of body and great top lines. He is a polled bull by Canadian sire CML Encore out of our original Ace cow A862E that has produced many outstanding animals in the Wakefield herd. His full flush brother was the top priced bull at our 2017 bull sale selling to Vida Montana. Masquerade himself sold last year for \$7000 to the Clarence Valley and he was the sire of the top priced bull at last years sale in Wakefield Patriot selling to a repeat buyer from the Bangalow area. Top 5% on calving ease on daughters and top 20% for rib fat.

COMMENTS: Lorax is a homozygous polled, red factor by by LT Ledger and a real favourite here at Wakefield. He is a tremendously quiet boy that is giving us thick, meaty bulls and feminine wedge shaped females. His full flush sister is a very stylish cow that has been in our show team, she milks well and is very fertile. Plenty of sons to choose from that will be terrific herd improvers.

COMMENTS: The progeny from SS Niagara are docile and correct while maintaining natural finishing ability. When we talk about beef, this bull is producing plenty of meaty bulls with high retail beef yields. Females are breeding well in our herd and the bulls have wonderful phenotypes with good temperaments.

Angus Society Suffix DNA Key:

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

^{PV} - Both parents have been verified by DNA.
^{SV} - One sire has been verified by DNA.
^{DV} - One dam has been verified by DNA.
- DNA verification has not been conducted.
E - DNA verification has identified but the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

COMMENTS: Quantum Leap is another polled, red factor son of Wakefield Lorax L982E. The Lorax progeny are true to Charolais type with good topline, neck extension and powerful heads. Did I mention the temperament on the Lorax sons, it's amazing. Will add finishing ability with good growth and a positive set of carcass data. This young bull has good calving ease and ticks all the boxes. Drop him in your paddock today and see the difference a Charolais can make on your herd. Top 20 % for calving ease on daughters

COMMENTS: This outstanding polled Silver Bullet son catches your eye every time you go into the paddock. He has good conformation, standing on good feet and legs with tremendous length, muscle and eye appeal. Quickstep has plenty of punch on his dam's side from French sire Ijoufflu. His mother Amaze 10 is the dam of the Supreme Charolais exhibit at the Charolais National 2019. We rate Amaze 10 as the best cow we have ever bred! He has positive calving ease figures and above average growth, a real 'curve bender'. Well worth your consideration! Top 20% for 200 day growth and top 15% for RBY.

COMMENTS: Quarry is a Lorax son that has a soft skin and good length of body. Lorax has a wonderful temperament and excellent hair type. The calves are very correct with great depth of body, broad muzzles and good feet and legs. This young bull is homozygous polled and his dam is an exceptional female. The combination of the French grandsire Gauguin on his dams side and the Canadian gives a true to type Charolais with milk, longevity, muscle and growth. Don't miss out on this one!

COMMENTS: Quite A Guy is a homozygous polled bull that has tremendous body length and muscle. His sire is Canadian Champion of the World winner for 2020 Elder's Blackjack. Blackjack continues to stamp his progeny with the consistency we expect from the line. This bull is a soft coated bull with good growth and a natural doing ability. A bull that would suit many beef enterprises. Well worth a look! Top 15% for gestation length and rump fat, top 5% for 200 and 600 day growth and rib fat, top 10% for 400 day growth and scrotal size.

COMMENTS: Quickbequick is a polled Maharajah son that has good growth, plenty of body length and a wonderful temperament. Quickbequick is bred in the purple with top shelf genetics on offer here. His Dam Amaze 10 is the dam of the Supreme Champion Exhibit at the Charolais National 2019 and Supreme Interbred Female at the EKKA in the same year. She keeps producing amazing progeny like Quickbequick! He has been out with cows up until a month ago so is a little bugged but ready to work. He has a lovely soft skin and we feel he will produce outstanding progeny that everyone will want. Top 20% for Retail beef yield.

COMMENTS: An eye catching son of Rennylea Kodak out of an A241 female to start the Angus sale today. He has a smooth muscle pattern, amazing growth and an easy fleshing ability on a big frame. He has tremendous length of body with plenty of punch. Wakefield Kodak's dam J462 is a fertile cow that never misses a beat. She is a big, roomy cow with good depth of flank, a well made udder and a great temperament. Don't overlook this outstanding fellow he's well worth your consideration. Top 5% for grain fed index and scrotal circumference, top 10% for Angus breeding and domestic indexes, and top 15% for grass fed index and IMF. Top 20% for 400 and 600 day growth.

COMMENTS: A very good bull with plenty of meat by an American AI sire in QHF WWA Black Onyx 5Q11. This bull has a good finishing ability on a good frame. He is free moving and has very good weight for age. His dam is a Bartel cow in the Wakefield herd that has been producing exceptional progeny with plenty of style and thickness. He is a slick coated bull with good temperament, depth of body and plenty of muscle definition. Onyx Q428 has been used in the Wakefield herd on heifers and cows. His calving ease direct, gestation length and birth weight figures suggest he would be suitable for use on heifers. Top 2% for domestic and grass fed indexes, top 5% for calving ease direct, and gestation length. Top 10% for Angus breeding indexes, 400 day growth and RBV and top 15% for birth weight, 200 and 600 day growth, carcase weight and EMA.

COMMENTS: Q425 is another Genesis son that is long bodied and deep flanked. A bull that has good muscularity and a great top line. Genesis is giving us thick, correct phenotypic bulls with incredible growth and power that are born easily. His dam has a perfect udder, milks well and has a wonderful temperament, a stylish sweet cow in our herd. This bull catches your eye and certainly has plenty of meat in him, he would suit many beef operations. Top 1% for milk, top 5% for 600 day growth and carcass weight and top 10% for 400 day growth and grass fed indexes. Top 15% for 200 day growth and top 20% for calving ease direct and Angus breeding and domestic indexes.

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following ids.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au
