20TH ANNUAL CHAROLAIS & ANGUS BULL SALE

Friday 15th August 2025 at 1pm
"Wakefield", Wollomombi, NSW

"Wakefield" is located approximately 55km
East of Armidale on the Waterfall Way.

* 141km South West of Grafton.

* 35km West of Ebor.

The Sale will be Interfaced via StockLive Elite.

Visit the website for more information:

We are pleased to welcome you to the Twentieth Annual Wakefield Sale.

It seems like no time since our first sale at the showgrounds in Armidale – how time flies. It has been fabulous to meet so many people over the years and see the Wakefield herd grow into one of the larger Charolais herds in Australia. Jenny is planning a few things for the sale to celebrate 20 years, but it is all a bit mysterious at the moment! I guess we will see what she is planning!

This has been a year of extraordinary rainfall for most of us with Cyclone Alfred impacting the North Coast and inland areas earlier in the year and more recently an East coast low impacting the Central Coast and inland areas heavily. A succession of blocking high pressure systems in Southern Australia have caused a major drought in Southern NSW and Victoria but appear to be breaking down and rainfall is returning to more normal levels. After our severe drought in 2019 we know exactly what they are going through, and our thoughts are with the Southern farmers. We all remember the high cattle prices after our drought broke in 2020 and there will certainly be pressure on the market from southern restockers which I don't expect will be as pronounced as 2020 but coupled with Trump Tariff inspired export demand, I think we can look forward to some healthy prices in the next 12 months.

The wet conditions have made pasture renovation and fencing a bit more challenging this year but thanks to a team effort we have planted about 325 acres of annual/perennial rye and permanent pasture. We are continuing to catch up on repairs and replacement of fences and a big thank you to Darren, Tash and family who have been with us for 12 months now. It has made a big difference to have a hand with all the jobs and there is light at the end of the tunnel albeit still a bit distant! The next year will see more of the same with some contractors helping with the last of our boundary fencing to take the pressure off a little.

It was a pleasure to attend and once again sponsor the Grafton weaner sales and have a chance to see an outstanding line up of young cattle. Congratulations to the vendors on the quality of the cattle on display. The most

noticeable feature from the sales we attended was the premium that the Charolais infused weaners attracted over their British counterparts. This was mostly being driven by demand from Queensland for cattle that are suitable for their environment, but also solid enquiry from Western NSW producers for cattle with high growth and the ability to hit target markets quickly.

On the family front we lost John in March aged 91. It has certainly been the end of an era, and I would like to take this opportunity to thank him for his selfless devotion in developing Wakefield into the property it is today and look forward to continuing the legacy of beef cattle production for the next generation.

Chris, Lucy and Annie continue to be very busy and are expecting a new addition to the family very soon. We are looking forward to introducing him to his first bull sale shortly! Nothing better than growing up on a farm! They continue to improve their farm at Dorriggo and are busy running both farm stays. The Good Life Beef business is going well, and they are continuing to lease about 3000 acres including part of Wakefield.

Our youngest daughter Claire continues doing two days a week at a local Armidale practice and an increasing amount of local vet work. She is enjoying her house at Chandler and has Twiggy the whippet as a house mate. Twiggy spends a bit of time at Wakefield as well and has put the wind up the local hare population here. The new clinic has been delayed a little with council regulations and, with some modifications, will be open for business shortly.

We are very grateful to our family for everything they do for us and proud that they see a future in agriculture. We are extremely confident that the farms will be in very capable hands when Jenny and I want to step back.

Over the last 12 months, once again, there have been many outstanding results in feedlots, sales, abattoirs, showrings and stud bull auctions from stock sired by Wakefield bulls.

It is very pleasing to see such great recognition of the Wakefield brand and the progeny receiving strong demand from buyers. The overwhelming comments have been how well the bulls are performing under tough conditions, their longevity, and the market suitability of their progeny. We would like to thank our bull buyers for their loyalty to our program.

The Wakefield bull breeding program is tailored to produce calves which will fit the specifications of a wide range of markets and remember we are a commercial operation as well and have a good understanding of what is required. We appreciate feedback from our clients on how our bulls are performing as it helps us to make more informed breeding decisions. Wakefield has one of the most genetically diverse herds recorded, particularly in the Charolais, as a result of our emphasis on targeting proven female lines. We have introduced embryos from a range of herds and maintain cow lines we have identified as breed leaders. There is no doubt in our mind that to breed good bulls it is critical to have a lot of depth in the cow herd and we are not afraid to use older genetics if they have the runs on the board.

Our emphasis is on breeding tough cattle that are at the top of the breed for dollars earned. The bulls this year have been prepared on planted rye and pasture grass paddocks with very limited or no grain assistance. They will present in a forward, but not fat condition and we are very happy with the way they are shaping up. As always, we will not compromise by heavily grain feeding our bulls. We are not one of the breeders whose bulls are the best you will ever see them on sale day! We think this is critical to the longevity of the bull and his ability to hold condition under tougher conditions. Quite a few of our bulls are jumped directly off the truck straight into client's cow herds!

We look forward to seeing you on Friday the 15th of August at our "all weather" sale complex. Complimentary lunch will be available prior to the sale, which commences at 1pm. Remember if you would like any more information, we are only a phone call away and on the day, pack a jumper and bring your catalogue!

The Frizell Family

L to R: Chris, Lucy, Annie, Claire, Jenny and Greg

This year we celebrate 165 years of continuous cattle breeding as Wakefield has been held in the same family since 1860.

Wakefield began breeding Charolais in 1970 when the breed was first introduced into Australia and used most of the early French bulls in grading up programs until currently a herd of 550 Charolais and Angus females are maintained.

Through the years there have been selected introductions of stud Charolais females, purchase of embryos, regular artificial insemination and embryo transfer programs.

We have been breeding Angus for our composite program for many years and for the last 18 years have been building our registered Angus herd.

In combination with upgrading existing cows to APR status, large scale artificial insemination/embryo transfer programs and introduction of industry leading embryos the Angus herd is growing rapidly.

Our emphasis is to produce bulls to increase profit in our client's herds and the calves born over the next few years will be sired by a smaller number of select sires. We think that Canadian, French and Australian Charolais sires provide the balance of growth and carcase characteristics we require. Angus sires are being sourced from the US and Australia.

Wakefield was amongst the pioneers in the use of Charolais Composite bulls and it is pleasing to see Charolais being recognised as the "breed of choice" in crossbreeding programs.

We have decided to concentrate more on our purebred lines as they seem to provide more uniformity in their progeny and keep breeding programs simpler for our clients. A lot of herds have used composite bulls as a stepping stone into the Charolais breed and have quickly realised the financial benefits of crossbreeding.

Our aim across both breeds is good calving ease while maintaining growth and breed specific carcase characteristics.

Wakefield is a Group Breedplan member so EBVs are available on all purebred bulls and our herd is based around selecting for commercially important traits, such as yield, growth and feed efficiency. We are bull breeders not bull feeders.

Structural correctness is very important to us and we like to have feedback from our clients to make sure the bulls are performing well under all conditions.

We are proud of our sale bulls and can recommend them to you as herd improvers. They can be purchased in the knowledge that they will perform well under commercial conditions and are fully guaranteed.

"Wakefield" in the 1950s

WAKEFIELD IN ACTION

The Wakefield bull breeding program is tailored to produce calves which will fit the specifications of a wide range of markets.

Photos: The Wakefield genetics in action!

SALE INFORMATION

REFRESHMENTS - Complimentary lunch and refreshments will be provided by Wakefield.

INSPECTION - Inspection can be made prior to sale day by appointment with the agents or the vendors. Bulls will be available for inspection on sale day from 10am.

UNABLE TO ATTEND - Online bidding and live streaming with Stocklive using a Starlink connection will be available throughout the sale. Over the phone bidding by arrangement with the agents or vendors is also available and private inspections are welcomed and encouraged at any time prior to the sale.

TREATMENT SCHEDULE BULLS 28/07/2025

- Leptoshaed vaccination
- Pestivirus vaccination
- Vibriosis vaccination
- Three-day sickness vaccination
- Arrest Easy Dose

1/8/2025

- Lepto booster (booster required yearly)
- Pestivirus booster (booster required yearly)
- Three-day sickness booster (booster required yearly)
- Vibriosis booster (booster required yearly)
- 8 in 1 booster (booster required yearly)
- Multimin injection

QUALITY CONTROL

- Pestivirus tested negative (hair sample)
- Semen tested
- Bovilis MH vaccinated at weaning
- Johnes Status – JBAS 7
- EU Accredited herd
- Charolais bulls: PA, polled / horned tested and Sire verified
- Angus bulls: AM, NH, CA and DD status tested and Sire verified.

TREATMENT SCHEDULE HEIFERS 02/08/2025

- Leptoshaed vaccination
- Pestivirus vaccination
- 8 in 1 booster (booster required yearly)
- Multimin injection

GUARANTEE - In the unlikely event of infertility, provided it is not caused by injury, stress or disease contracted post sale, we will endeavour to supply a satisfactory replacement if available or issue a credit to equal the purchase price minus the salvage value to be used at future Wakefield sales. The purchaser will provide a veterinarian's certificate within six months of the purchase date.

TRANSPORT - Carriers will be in attendance at the sale. We take a keen interest in arranging the most favourable transport for your purchases. This year we are offering free freight from Wakefield to Grafton, Casino, Walcha, Armidale, Kempsey and Lismore saleyards, with the carrier of our choice. Delivery arrangements are to be made in writing on the buyers instruction form provided in the back of this catalogue.

STUD TRANSFERS - All registered animals are eligible for transfer. For transfer of animals purchasers must be members of the relevant breed society.

REBATE - 2% rebate available to outside agents accompanying potential purchasers and settling for purchases within 7 days of receipt of invoice.

NOTICE TO BUYERS - All lots will be sold subject to the usual terms and conditions governing auction sales. Phone service is available at sale complex. Please contact the vendors or your preferred agent on sale day to arrange phone hook-up. This year's sale is also interfaced with Stocklive.

CARING FOR YOUR BULL

This year's sale bulls range from 15 - 24 months of age and will need to be managed accordingly.

There are many advantages in buying younger bulls. You see the bull closer to the weights you are likely to be marketing your finished cattle at. You will get an extra year of use from your bull and most importantly you are getting the 'pick of the crop'. In our experience the best bulls will be good at all stages of growth and not only when they are mature. You can be confident that a young bull with eye appeal will only get better! But younger bulls are still growing quickly and need enough feed to maintain their growth pattern while settling your cows.

Younger bulls can be introduced into paddocks with older bulls but remember he will be on the bottom of the pecking order and will need room to avoid the others. His nutritional requirements will be greater than a mature bull so make sure he has adequate feed.

Our bulls are used to running in a mob and will arrive in a strange environment at the purchaser's property. Unload him and if possible make sure he has a steer or cow as a companion straight away.

Our cattle are mustered on motorbikes and are handled gently but firmly. They may need to be introduced to horses. The bulls have been trained to respect electric fencing.

HOW TO REGISTER with

STOCKLIVE ELITE

Follow these easy steps to start bidding:

Visit www.stocklive.com.au using your desktop, laptop, iPad, iPhone or Android device. NO App required.

Select the **bid** icon beside the sale you wish to bid on.

If you're new, select **register**, and complete the form with all your details, **accept sale conditions**, select **create bidder registration**.

You will receive an email from StockLive. Select "**Confirm my bidding account**" to set your password and **accept** Bidder Account Terms & Conditions and Privacy Policy followed by **create my account**.

Congratulations! Your StockLive account has been created and your bid request is pending. You will be notified via email when your request to bid has been approved.

Existing users, follow steps 1 & 2, select login, enter your details followed by the **request to bid** icon beside the sale you wish to bid on and then **accept** the terms.

On Sale Day, follow steps 1 & 2, select **enter auction** to watch, listen and purchase when the sale is flashing **LIVE**.

Invoicing and delivery will be carried out as per your registration details by the respective Selling Agents.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Charolais BREEDPLAN EBV Explanations

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above a value of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Charolais BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcase merit and docility. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

- **CE % Dir = Direct Calving Ease** - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

- **CE % Daughters = Daughters' Calving Ease** - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Carcase Weight EBV (kg) is based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) indicates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcase weight than will sires with lower Eye Muscle Area EBVs.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Rump Fat EBV (mm) is an indicator of the genetic differences between animals in fat depth at the p8 rump site in a standard 300kg steer carcass. Sires with low, or negative, fat EBV are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Rib Fat EBV (mm) is an indicator of the genetic differences between animals in fat depth at the 12/13th rib site in a standard 300kg steer carcass. More positive or more negative Rib Fat EBVs may be more favourable, depending on your breeding goals relating to the finishing ability of your animals.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300kg steer carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg steer carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Charolais selection indices are calculated for two standard market specifications – Domestic Terminal and Northern Maternal - and are designed to optimise profit outcomes from commercial production systems. More information is available on Charolais Selection Indices.

Domestic Terminal Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with a British breed cow base (e.g. Angus)

targeting the domestic trade. This index assumes all progeny will be marketed with steers finished in the feedlot for 90 days and weighing 450 kg (250 kg HSCW and 7 mm P8 fat depth) when marketed at 12 months. Heifers will be in the feedlot for 75 days and weigh 430 kg (230 kg HSCW and 9 mm P8 fat depth) at 12 months. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Maternal Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with Bos indicus cows in Northern Australia targeting the grass fed Jap Ox market. Selected heifers are retained for breeding and so maternal traits are of importance. Steers target 650 kg live weight (360 kg HSCW and 12 mm P8 fat depth) and heifers 630 kg (340 kg HSCW and 14 mm P8 fat depth), at 26 months of age. In response to industry feedback; positive emphasis has been placed on finishing ability.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

- **less than 50%:** Low accuracy. EBVs are preliminary and could change substantially as more performance information becomes available.
- **50-74%:** Medium accuracy. Usually based on the animal's own records and pedigree.
- **75-90%:** Medium-high accuracy. Some progeny information included. EBVs may change with addition of more progeny data.
- **more than 90%:** High accuracy estimate of the animal's true breeding value.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

COMMENTS: Kind Sorted has produced some wonderful progeny for us. The bulls have plenty of muscle with positive fats and wonderful toplines. The females are soft coated with correct phenotypes and plenty of style. Kind Sorted has a wonderful disposition and holds his body condition even when out with cows.

COMMENTS: Futurity Trademark was purchased in 2023 for his growth, muscle, and the biggest EMA in the top 1% of the breed along with his IMF in the top 1% of the breed. He has positive fats in the top 4% of the breed and a correct phenotype and is producing calves that are born well and then grow like mushrooms. The data set on this bull is amazing.

COMMENTS: Clarinda Downtown has explosive growth, huge EMA, IMF and positive fats. The bulls are growthy with plenty of muscle and great topline and the females have soft coats, are long bodied and should milk well.

ANGUS REFERENCE SIRES

Angus Society
Suffix DNA Key:

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA
SV : the sire has been verified by DNA
DV : the dam has been verified by DNA
: DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

COMMENTS: What a top pick this bull is to start the sale today! He is a free moving, polled bull with plenty of muscle. Ultra Recharge is a long bodied bull that has tremendous spring of rib. He is an Ascot Recharge son that is correct and has tremendous body length and growth. He has positive fats and a good IMF while still showing plenty of power and meat in this young bull. We would expect this bull to produce for all beef operations.

COMMENTS: What's not to like about this bull, he's bred in the purple! Ulysses is a powerful polled bull by Australian sire Advance Domino out of our old faithful dam Wakefield Amaze 10. He is free moving with a long body, good neck extension with a good shoulder set. This bull is thick and powerful and has a very correct phenotype that we expect from the Amaze progeny. He is the full brother to Wakefield Amaze 38 that was an outright winner in her own right, winning in 2019 Supreme Champion Interbreed female at the Charolais National and at the Ekka and then winning again in Sydney as an 8 year old cow in 2022. This is the last natural born calf of our lovely old Amaze. Front paddock for this bull...don't miss out on this one, he'll make you very happy!

COMMENTS: This young scurred bull catches your eye every time you go into the paddock. He has good conformation, with tremendous muscle set and thickness. Undone has a smooth shoulder set and great softness to a meaty bull, he really is worth looking at. His calving ease direct and carcass data with positive fats make him a valuable bull for any herd. Well worth your consideration!

COMMENTS: There's a lot to like about this bull. No way will he be upstaged.... He is a free moving, scurred bull with a long body, good neck extension and shoulder set and plenty of muscle and power. This bull is thick and powerful and has a very correct phenotype that we expect from his Ripper dam! He has plenty of growth and would suit many beef operations.

COMMENTS: Look out, make way for Upturn...and doesn't he look amazing strutting around! He is red factor, scurred son from homebred sire Noble that has a natural finishing ability, good depth of flank and length of body. The Wakefield Noble calves are born easily with great depth of body, broad muzzles and good feet and legs. Upturn has good calving ease, birth weight and positive fats as well as the smooth muscle pattern that the Noble sons exhibit. A true to type Charolais with milk, longevity, muscle and finishing ability. Don't miss out on this one!

COMMENTS: Urchin is a polled bull by AI Canadian sire SVY Trust that will produce thick, well finished progeny. He has capacity with good spring of rib while maintaining incredible power and thickness. This bull has a positive set of calving data and a natural finishing ability while maintaining the muscle pattern that Charolais are renowned for. He is a soft and true-to-type Charolais. His figures suggest that he could be used on heifers and he was very small born. This bull would breed show steers and vealers until the cow's come home. Don't miss this one.

COMMENTS: U Bet is a polled,son of homebred sire Rockabilly. The Rockabilly progeny are true to Charolais type with good topline, plenty of muscle and powerful heads. Did I mention the ease of calving on the Rockabilly sons, it's amazing. Will add finishing ability and calving data suggests suitable for use on heifers. This young bull ticks all the boxes. Drop him in your paddock today and see the difference a Charolais can make on your herd!

COMMENTS: Ultimo is a soft, smooth coated bull that is a very neat, correct bull that catches your eye. He is a son of Canadian AI sire SVY Trust that will produce powerful progeny with depth of flank and a smooth muscle pattern with good neck extension. His positive set of calving data especially his gestation length make him a bull that might suit heifer joinings. His dam is a great cow from the Blush line that milks well and is very fertile. He is homozygous polled and has been used lightly on heifers in the Wakefield herd.

COMMENTS: Viking is the last Charolais bull to sold at the sale this year, and he's a good one. He's a Noble son so has very good calving ease and birth weight data, which we have come to expect from the Noble progeny. Viking has a natural finishing ability with positive fats and good EMA. He is has plenty of muscle and the figures suggest that he could be used on heifers.

Genetic Conditions: AMFU,CAFU,DDFU,NHFU

COMMENTS: There's a lot to like about this Alkira Renegade son. He is a free moving, easy fleshing bull that catches your eye! He has a good head, length of body and a smooth muscle pattern. He has a good growth and a natural finishing ability. His dam is still in the Wakefield herd and is fertile with plenty of milk. The Renegade calves are all round sound, solid true to type Angus.

COMMENTS: Wakefield Testament U373 is a Tehama Testament son out of an old favourite cow by SAV Net Worth F852. This bull has a good disposition and plenty of muscle. He will also have longevity on his side as his dam is a fertile and easy doing female that milks well and always goes in calf, even as a 13 year old. U373 has a good head and a true to type Angus presence. This young bull will give you plenty of finishing ability and muscle and at the end of the day that's what it's all about!

COMMENTS: Another son of Musgrave Avenger that has a great length of body, slick coat and plenty of growth. The Avenger progeny are showing eye appeal and tremendous muscularity. His calving data suggests he will be suitable for use on heifers. His growth figures rate him in the top 20% of the Angus breed. This bull ticks all the boxes for most cattle operations. Well worth your consideration!

Angus Australia Disclaimer and Privacy Information

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

- PV: both parents have been verified by DNA.
- SV: the sire has been verified by DNA.
- DV: the dam has been verified by DNA.
- #: DNA verification has not been conducted.
- E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

Buyers option to opt out of disclosing personal information to Angus Australia

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents _____

from member _____ (name) do not consent to Angus Australia using my name address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Authorised Name: _____ Signature: _____

Date: _____

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350
